Causeway Sales Reconciliation: User Manual

PIE Automation Portal · Finance · Automation 01 · daily, Sunday to Thursday · about 5 minutes

Version 1.0
29 Oct 2026

A. Get the files ready (before opening the portal)

1. **AFS settlement report (Excel).** Download the attachment from the daily AFS email and save it. Note the **file password** that comes with the email; you will type it in the portal. Do not open and re-save the file.
2. **Zoho invoice export (Excel).** In Zoho go to **Invoices**, filter by the **sales date**, and **Export**. The file is named `invoice_<date>_<serial>`. Upload it as it is; the portal cleans it for you.
3. **Images from the email.** Save screenshots of the parts of the email that show the amounts:
   - the **Cash** amount (from the report / image),
   - the **PIE / MSwipe** amount (the PIE POS section of the same image as AFS).

   The images are for reference only: the portal shows them beside your entries so you can read the amounts. It does not read numbers from them.

B. Run the automation

4. Open the portal (`http://<portal-address>:3500`) and click the **Causeway Sales Reconciliation** card.
5. In **Inputs › Files**, drop or click to choose each file in its own box:
   - **AFS settlement report**: the AFS Excel, then type the password in **File password**. A small green tick, **Total matches**, confirms the transactions add up to the file's Total row; if it shows red, the file is wrong and Run stays disabled.
   - **Zoho invoice export**: the Zoho Excel.
   - **Images (for reference)**: the email screenshots (you can add more than one). Click a file to see it in **Preview**.
6. In **Manual entries**, fill in **Sales date**, **Cash amount (BHD)**, **Cash deposit date** (same day or later; shown on Receipt (Cash)) and **PIE / MSwipe amount (BHD)**, reading the amounts from the images. Use 3 decimals, e.g. `100.500`. AFS rows dated after the sales date are listed in a popup and fill **AFS amount for the next day** (left out of the Variance, kept in Receipt (AFS)). Put yesterday's AFS for this date in **AFS amount from the previous day**. Changing a filled value warns you; running is then your responsibility.
7. Click **Run automation**. Check the values in **Are these values correct?** and press **Yes, run** (or **Go back and edit**).

C. Check the result and post to PACT

8. Read the three figures at the top: **Zoho total**, **Cash + AFS + PIE** and **Variance** (Zoho total minus the payments). Read every **warning** before posting:

Warning	What to do
AFS file dated a different day	Wrong AFS report uploaded: get the report for the sales date and run again.
Payments are more than the Zoho total	Variance is negative: re-check Cash and PIE against the images, and the Zoho date filter.
AFS commission does not match the file	Compare the commission with the AFS Excel before posting the AFS receipt.

9. Open the **Result** tabs and type the values into PACT in this order:

#	Result tab	PACT document
1	Direct Sales Invoice	Finance › Direct Sales Invoice (product codes and quantities)
2	Credit Note EVD + KFC / Credit Note (JV)	Credit Note (JV Type) for EVD + KFC (only shown when the day has them)
3	Receipt (Cash)	Cash Receipt
4	Receipt (AFS)	Bank Receipt, AFS (2.2% commission line included)
5	Receipt (PIE)	Bank Receipt, MSwipe (1.65% QR charges line included)
6	Reconciliation › Variance	Credit Note (JV Type), Batelco marketing fund

10. Download the outputs with the download buttons: `causeway_reconciliation_YYYYMMDD.xlsx` (every result table) and the Zoho file with a new **Formatted** sheet (the original sheet is unchanged).
11. Every run is saved for audit. Open the **History** tab to see past runs, their inputs and outputs.

> **Good to know:** the portal never changes your uploaded files. If you refresh the page, choose **Keep my data** to continue, but type the AFS password again, because passwords are never saved. If a run fails, read the message, correct the file or the value, and run again.
